

## 4th International Conference on Earthquake Geotechnical Engineering, Greece, 25-28 June 2007

What: 4th International Conference on Earthquake Geotechnical Engineering

When: 25-28 June 2007

Where: Thessaloniki, Greece

Organizer(s): International Society of Soil Mechanics and Geotechnical Engineering (ISSMGE)

Synopsis: "The construction of complex infrastructures and the currently imposed safety requirements, render soil dynamics and geotechnical earthquake engineering a field of increasing significance to modern societies.

Lessons from recent and past earthquakes and numerous interesting research efforts provide both an incentive and a window of opportunity to achieve advances in many fields at this time. The conference will provide a forum for communication and dissemination of on-going advances in both research and practice, its aim being to encourage continuous efforts at advancing practice in all fields."
